Comments		During the middle of the project, Jason was very busy with cross country, making it hard for him to contribute much meaningfully during a span of a few weeks. However, in this last sprint, Jason has been largely responsible for connecting our database server to our app, writing almost all of the code in the application to read in the JSON files provided by the GET request. This work alone has more than made up for the lower productivity earlier on.	Ryan has been a steady worker throughout the whole project, and despite not being a strong coder, he contributed as much as he could to the features within the app. Ryan is also responsible for a good chunk of the app's design, giving it a visual appeal that it likely would have been lacking without his input.	Throughout the whole project, Nate has been the steadiest member of the team. Nate spent countless hours working to get crucial features like the scrolling image view and the expanding images to work. He was consistently available to work and always willing to offer help to whatever anyone else was working on. Nate's only issue this semester was an inability to delegate well. For this reason, he ended up taking on a lot of work that could have been distributed more evenly amongst the team members.	Alex's input to the team this semester was excellent. His work on getting the google app engine and server running were crucial to running the leaderboard, which was one of the main functions of our app. Alex was always available when he said he'd be, and always put in 100%. Alex has also been a lot of fun to work with, and often provided the comic relief to relieve the stress of the project a bit. In some of the more stressful parts of the project, Alex helped to keep morale up, which in turn kept the productivity going strong until the end.	Overall, I'd say the work was pretty evenly split between the five of us, although Nate probably did more than his fair share.
